

J. hinnulea or J. bayardae?

There is some confusion on the correct name of *Jadera hinnulea* (*bayardae*). *Jadera hinnulea* has priority over *Jadera bayardae*. This document follows the history of these names and provides text from those documents.

Year	Source	Text
1979	Göllner-Scheiding, U. "Die Gattung <i>Jadera</i> Stål, 1862 (Heteroptera, Rhopalidae)." <i>Deutsche Entomologische Zeitschrift</i> 26.1-3 (1979): 47-75.	<i>Jadera hinnulea</i> BAYARD, 1934: M.S. Thesis, Iowa State Coll., 23, Taf. IV.4 First sentence of description " <i>Jadera hinnulea</i> was described by BAYARD in 1943."
1982	Göllner-Scheiding, U. "Ergänzungen zu Gattungen der Rhopalidae (Heteroptera)." <i>Deutsche Entomologische Zeitschrift</i> 29.4-5 (1982): 459-467.	In my "Revision of the genus <i>Jadera</i> , STÅL, 1862", which was published in 1979, I left the name which was given by ELLEN BABCOCK BAYARD when she described the species in 1943. The species at the time had been described in detail and an examination of types and other material showed it to be an independent species. However, this new description had been conducted within the boundaries of a Master's Thesis at the Iowa State College. Unfortunately I did not have access to its printed form. I was informed about this fact, assumed however, that a Master Thesis would be still valid. Another reason to keep the name E.B. BAYARD chose, was the good and detailed description of the species. Furthermore, an inquiry at the Iowa State College showed that E.B. BAYARD did not intend to publish her findings any more. The member of the administrative board, G. SEIDENSTUECKER in Eichstätt, West- Germany, was so kind to point out that manuscripts, which are not published are not considered valid, and that thus my actions were not correct. The name <i>hinnulea</i> is thus invalid, and needs to be changed. Following the advice of G. SEIDENSTUECKER, I suggest <i>Jadera bayardae</i> GOELLNER-SCHEIDING as a new name, and I hope to do the discoverer some justice.
1988	Henry, Thomas J., and Richard C. Froeschner. <i>Catalog of the Heteroptera, or true bugs, of Canada and the continental United States</i> . EJ Brill, 1988. On page Pg 664	"Note: Göllner-Scheiding (1979, above) published the description of this species using a manuscript name given by E. B. Bayard (1943, M.S. Thesis, Ia. St. Coll.) and, later (Göllner-Scheiding, 1982, above), proposed the new name <i>J. bayardae</i> . Her earlier validation of the name <i>hinnulea</i> has priority (Göllner-Scheiding, 1984, <i>Deut. Ent. Zeit., new ser.,</i> 31 :337)"
